PROFESSIONAL HEALTHCARE RESOURCES, INC GOES AUTOMATED WITH NEW POINT OF CARE INFORMATION SYSTEM

Annandale, VA April 23, 2010 Professional Healthcare Resources one of the largest home care and hospice agencies serving Maryland, Virginia and Washington DC, is pleased to announce the implementation of its new point-of-care clinical system, Cerner BeyondNow.

The information system has been implemented all eight branches and will enable the company to manage patient records in a more secure, efficient and coherent manner. Each treating clinician will be able to log-in and gain immediate access to the patient's record, rather than comparing patient notes as before. For example the visiting nurse will be able to securely communicate any changes in a patient's health status to others clinicians on the care team so that they can respond accordingly.

Cerner is a leader in clinical information systems in the healthcare industry and the BeyondNow platform is the largest and most functional point-of-care system available to the health care industry today. The system handles billing, scheduling, patient information, physician's orders and secure communications.

Ron DeCesare, CEO of Professional Healthcare said "The Cerner system will allow us to share information across the healthcare spectrum so that physicians, hospital and clinicians can coordinate care to make better clinical decisions, improve patient outcomes and reduce costs. Eventually all healthcare providers will need to connect and share medical records to effectively manage all the clinical information generated by the fragmented healthcare system."

Clinicians are equipped with wireless devices so that patient progress can now be recorded in the patient's home, rather than back at the office where details may be forgotten.

There is now no room for patient records getting lost or into the wrong hands. Every record is held on the company's secure HIPAA compliant server and is only accessible by authorized

personnel. Eventually treating physicians will be able to log-in to their patients' records to access medical information and monitor progress.

Wanda Strickland, Professional Healthcare's VP of Clinical Program Development and Project Manager for Cerner implementation remarked "I am very excited that these months of hard work have finally paid off. Cerner is now fully functional across the agency and is reducing paperwork and improving operational efficiencies. All our nurses, therapists and team members manage their visits, schedule appointments and access patient information, as needed, while in the patient's home. It has transformed how we provide care and improved the flow of communications."

About Professional Healthcare resources, Inc

Professional Healthcare is the largest independent home care firm in the Washington, DC metropolitan area. Founded in 1994, we provide home health care, hospice, and private duty personal care services to over 1,500 patients each day. The company is headquartered in Annandale, Virginia, and operates eight branches throughout the tri-state area: four in Virginia (Annandale, Norfolk, Richmond, and Roanoke), three in Maryland (Baltimore, Bethesda, and Lanham) and one in Washington, DC. Our mission is *"To provide high quality home healthcare and hospice services to more people."* For more information, visit our website at www.phri.com.
